

Filter warranty form

Kateurope reference		Order number
Vehicle model		VIN number
Date of installing		Date of uninstalling
Mileage at installing		Mileage at uninstalling
Is there any MIL-light on? Are there any error codes on?		
Temperature before the catalyst		Temperature before the filter
Back pressure at idle		Back pressure at fast idle
Mileage since the last regeneration		
Describe shortly the fault symptoms and measures taken for its repair		

We'd like to remind you that very often a fault shown on the particle filter may be caused by a fault in the readings (defective sensors, damaged pressure pipes), by the poor state of the exhaust system (failures in turbo or injectors, EGR system not operational), or even by factors such as the quality of the oil or fuel; and therefore, replacing the DPF may not always solve the vehicle real issues.
